Multi-Sector Opportunistic Strategy

MARKET OVERVIEW

The first quarter brought bursts of optimism as the world continued its uneven recovery from the COVID-19 pandemic and the economic lockdowns that dominated 2020. Tremendous progress in the development of a vaccine and a thus far effective delivery system of administering doses to a meaningful proportion of the population have put the U.S. on a path to normalcy. During the quarter, some of the uncertainties in domestic politics were resolved as the new administration accomplished the much anticipated next round of fiscal stimulus to keep the economic recovery on track. The $1.9T American Rescue Plan Act was signed into law on March 11 and delivered another round of direct payments to individuals, enhanced unemployment benefits, and aid to states. Further stimulus measures may take shape in the months ahead as political dialogue turns toward infrastructure.

Markets have shifted their focus to the implications for the future, which included some rotation in U.S. equity markets and a renewed debate on the global outlook for inflation. We believe that base effects related to last year's disruptions will lead to elevated inflation readings in the near term, but we expect those data points will be transitory and likely to fade into the second half of the year. Secular developments in technology and the effects of globalization continue to help keep prices contained, and cyclical components such as unemployment and broad resource slack will help cap inflationary pressures as well. This view is reinforced by a U.S. Federal Reserve that remains dovish and committed to keeping policy accommodation in place until it achieves its mandates on both inflation and employment. We believe that policymakers globally will remain supportive of continued economic recovery.

In our view, economic activity and corporate earnings will continue to rebound over the course of the year. Financial markets were mixed during the quarter. We believe sector and issuer selection in this environment is critical and favors active over passive management. Elevated cash levels and a high degree of personal savings will be a tailwind to growth.

Most spread sectors outperformed U.S. Treasuries during the quarter led by those with less interest rate sensitivity such as corporate high yield, bank loans, and securitized product. While there was no clear performance trend between rating tiers, there were notable exceptions within high yield, bank loans, and most securitized sectors, where lower quality generally outperformed. Shorter duration also outperformed.

HOW THE STRATEGY PERFORMED

The Strategy (gross of fees) returned -0.61% in the first quarter versus the Bloomberg Barclays U.S. Aggregate Bond Index return of -3.37%.

Positive Contributors

> Underweight U.S. Treasury and agency mortgage-backed securities and overweight spread sectors.

> Allocation to the corporate high yield sector. While all of the factors remain in place for a continued rally in high yield—vaccine availability, a supportive Fed, economic recovery, and stimulus—rising U.S. interest rates remain a hurdle. Fourth quarter earnings releases remain strong.

> Allocation to the high yield bank loan sector. The sector benefited from the steepening interest rate curve and additional stimulus. The technical picture remains supportive as a combination of collateralized loan obligation (CLO) issuance and positive retail fund flows provided sufficient demand for new issuance, net of repayments.

> Allocation to, and issue selection within, the asset-backed security (ABS) sector. Demand for short duration assets persisted throughout the quarter as interest rates backed up. The U.S. consumer continues to perform extremely well. Technicals across securitized product remain extremely favorable with new issue deal flow being met with insatiable demand.

Detractors

> Allocation to, and issue selection within, the emerging markets (EM) high yield sector. The EM debt rally of the last nine months of 2020 stalled in the first quarter. The backdrop has shifted to a phase where the big capital gains from the rebound in risk assets have passed and returns in EM debt going forward should come mainly from carry—still positive, but not as dramatic.

CURRENT STRATEGY POSITIONING

Sector Changes: We reduced exposure to corporate high quality, EM high yield, and Yankee high quality. We increased exposure to high yield bank loans and ABS.

Non-U.S. Exposure: We reduced the overall EM debt and non-U.S. exposure. Total non-U.S. exposure remains well below historical averages, and our total EM country exposure is below the six-year average for the Strategy. During the quarter, EM debt returns were primarily U.S. Treasury rate driven. EM high yield, having a higher spread/carry, outperformed the investment grade component of the sector, which has more sensitivity to interest rates. One of our most notable intra-sector allocations has been, and continues to be, increasing high yield EM and reducing investment grade EM. We continue to favor sovereigns in larger capital structures and prefer hard currency over local market exposure.

Corporate High Quality: An 83 basis points (bps) move higher in the 10-year Treasury rate, combined with a duration of 8.5 years, meant a difficult start to the year for the asset class. There simply was not enough initial spread to offset the rate move. Spreads were essentially flat quarter-over-quarter at +97 bps, thus remaining 30 bps through longer-term averages. Rate volatility caused a reduction in mutual fund inflows (though still surprisingly positive) and likely spooked foreign buyers as well. Supply, meanwhile, was equivalent to last year's record pace as issuers continued to opportunistically tap the new issue markets. Fundamentals are the bright spot with strong fourth quarter earnings and a robust outlook (consensus earnings growth for 2021 is 25%). Valuations remain constrained and the asset class is highly sensitive to rates. We have steadily reduced exposure, though we still see attractive opportunities within the BBB segment of the market, often in the more COVID-19-sensitive industries.

Corporate High Yield: The corporate high yield market continued its post-vaccine rally into 2021. However, index returns peaked in mid-February and gave up half the gains in the second half of the quarter as rising risk-free rates cut into returns and offset carry income. Lower quality bonds continued to outperform, led by CCCs—a result of high spreads that ground tighter and limited interest rate risk. With the sustained rally in crude prices, energy was the largest outperformer during the quarter while other COVID-19-impacted sectors such as airlines, aerospace & defense, and leisure also outperformed. Fundamentals remain at very poor levels in terms of leverage but liquidity positions are strong given high levels of cash on balance sheets. The outlook is favorable given expected earnings growth. We continue to view high yield constructively given the yield, lower interest rate risk, and economic expansion, despite spreads appearing rich relative to history and yields near all-time lows. We have maintained a meaningful allocation to the sector and have added to wider-trading industries such as energy, airlines, and cruise lines.

Securitized Product: We have positioned our securitized book of business to reflect the two areas of the economy where the fundamentals are strong: the U.S. consumer and housing. We have a significant overweight to ABS and non-agency residential mortgage-backed securities (RMBS). The U.S. consumer has several tailwinds at their back: low borrowing rates, record savings rates, unemployment trending lower, and the benefit of a third stimulus payment. The U.S. consumer debt service is near the lowest point in history. With respect to housing, we continue to see the tailwinds of low mortgage rates and limited supply. Housing also benefits from positive secular changes as the pandemic has increased demand. Both ABS and RMBS started out the year strong with spreads tightening during the first five weeks. Both sectors are invested in shorter-duration assets and have outperformed year to date versus longer-duration assets. For the remainder of 2021, we envision more of a coupon-clipping environment.

continued from page 1

OUTLOOK

As always, we believe it is important to stay diversified, have granular positions, and emphasize liquid investments. COVID-19, like other events that trigger volatility in the market, can affect valuations and create opportunities that we can take advantage of in the course of implementing our multi-sector relative value approach. We highlight the importance of credit selection and positioning in the current environment. Given the widening in spreads late in the first quarter of 2020, valuations had cheapened substantially, and we continue to identify opportunities in spread sectors, including those within non-investment grade sectors that we have added to and may continue to add to. Even with the recovery since the end of March 2020, we remained focused on credits that would benefit the most from a continued economic recovery. We believe some of the best total return and yield opportunities in fixed income can be found in spread sectors. Some of the specific sectors where we are finding the best relative value opportunities are out-of-index/off-the-run ABS, non-agency RMBS, high yield bank loans, corporate high yield, and BBB rated corporate investment grade.

PORTFOLIO MANAGEMENT

David L. Albrycht, CFA
Industry start date: 1985

Benjamin Caron, CFA
Industry start date: 1997

Stephen H. Hooker, CFA
Industry start date: 1993

FIRM OVERVIEW

Newfleet leverages the knowledge and skill of a team of investment professionals with expertise in every sector of the bond market, including evolving, specialized, and out-of-favor sectors. The team employs active sector rotation and disciplined risk management to portfolio construction.

INVESTMENT OPPORTUNITY

We believe that active sector rotation and superior security selection, combined with disciplined risk management, are the most effective means of achieving excess returns in the fixed income market. Relative valuation drives our approach. We strategically overweight undervalued sectors and purchase securities that meet rigorous investment criteria that take into account credit risk, management quality, issue structure, and technical market conditions. The process relies on intensive fundamental analysis.

The strategy seeks to generate high current income and total return by investing in securities across 14 fixed income sectors.

Multi-Sector Opportunistic has a maximum allocation to non-investment grade securities of 65% and maximum non-U.S. exposure of 50%. The average duration historically has ranged from three to six years.

INVESTMENT PROCESS

STEP 1 Sector Analysis and Allocation

- Top down, relative value approach
- Relative value analysis looks at: yield and spreads; supply and demand; investment environment; sector fundamentals

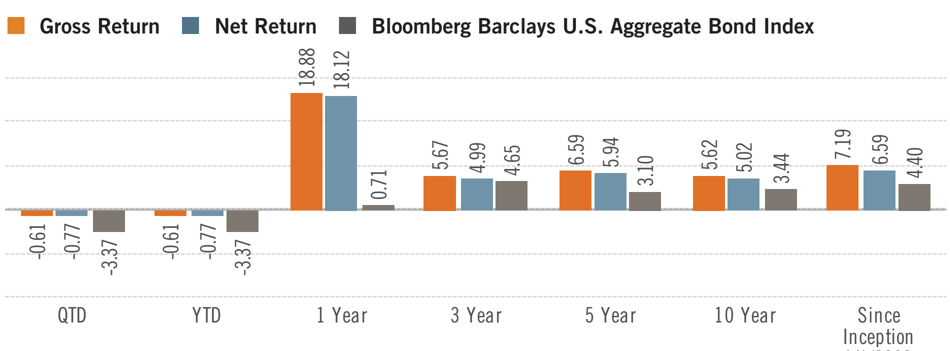
STEP 2 Issue Selection

- Bottom up, fundamental research driven
- Fundamental analysis includes assessment of: credit risk, company management, issue structure, technical market conditions, focus on valuations

STEP 3 Portfolio Construction, Oversight, and Risk Management

- Duration neutral strategy
- Manager review
- Sector concentration
- Systematic review
- Issuer exposure: maximum 5%, average <1%

PERFORMANCE (%)



Periods ended 3/31/21. Time periods over one year are annualized. **Past performance is not indicative of future results.** Net return is shown net of maximum management fees.

The Bloomberg Barclays U.S. Aggregate Bond Index is a broad-based benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS, and CMBS. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

Index: Bloomberg Barclays U.S. Aggregate Bond Index

[1]The ratings issued by Nationally Recognized Statistical Rating Organizations assess the credit worthiness of a corporation's or government's debt issues. The ratings apply to the fund's holdings and not the fund itself. Ratings are provided by Standard & Poor's, Moody's, and Fitch. For certain securities that are not rated by any of these three agencies, credit ratings from other agencies may be used. Where the rating agencies rate a security differently, Newfleet uses the higher rating. If a rating is not available, the bond is placed in the Not Rated category. Credit ratings are subject to change. Aaa, Aa, A, and Baa are investment grade ratings; Ba, B, Caa, Ca, C, and D are below-investment grade ratings.

RISK CONSIDERATIONS

Credit & Interest: Debt instruments are subject to various risks, including credit and interest rate risk. The issuer of a debt security may fail to make interest and/or principal payments. Values of debt instruments may rise or fall in response to changes in interest rates, and this risk may be enhanced with longer-term maturities. **Foreign & Emerging Markets:** Investing in foreign securities, especially In emerging markets, subjects the portfolio to additional risks such as increased volatility, currency fluctuations, less liquidity, and political, regulatory, economic, and market risk. **ABS/MBS:** Changes in interest rates can cause both extension and prepayment risks for asset- and mortgage-backed securities. These securities are also subject to risks associated with the non-repayment of underlying collateral, including losses to the portfolio. **High Yield Fixed Income Securities:** There is a greater risk of issuer default, less liquidity, and increased price volatility related to high yield securities than investment grade securities. **Bank Loans:** Loans may be unsecured or not fully collateralized, may be subject to restrictions on resale and/or trade infrequently on the secondary market. Loans are subject to credit and call risk, may be difficult to value, and have longer settlement times than other investments, which can make loans relatively illiquid at times. **Market Volatility:** Local, regional, or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio manager(s) to invest the portfolio's assets as intended.

Composite Dispersion: N.A. - Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year.

*Prior to June 2011, the Multi-Sector Fixed Income Team was part of Goodwin Capital Advisers, a Phoenix Company. Since management of the mutual funds prior to this date was under a sub-advisory agreement with Goodwin and the predecessor firm, the requirements for performance portability for inclusion in the composite have been met.

The Multi-Sector Opportunistic Composite contains all fully discretionary, fee paying multi-sector opportunistic accounts. Emphasis is on investments in fixed income across all 14 sectors of the fixed income market with the following restrictions: maximum below investment grade securities 65%, average credit quality is at least BB and non-US exposure 0-50%. Emphasis is active sector rotation and disciplined risk management to portfolio construction avoiding interest rate bets.

For comparison purposes, the composite is measured against the Bloomberg Barclays U.S. Aggregate Bond Index. The index is composed of securities from the Government/Corporate Bond Index, Mortgage-Backed Securities Index and Asset-Backed Securities Index, calculated on a total return basis, which includes price appreciation/depreciation and income as a percentage of the original investment. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

Newfleet Asset Management, LLC is a registered investment adviser and an indirect wholly owned subsidiary of Virtus Investment Partners. The minimum account size for this composite is $15 million. The Multi-Sector Opportunistic composite was created on April 1, 2012. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Past performance is not indicative of future results. The U.S. Dollar is the currency used to express performance. The annual composite dispersion is an asset-weighted standard deviation calculated for the accounts in the composite the entire year. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. Effective 1/1/13, accounts with leverage are no longer included in the composite.

Returns are presented gross and net of management fees and include the reinvestment of all income. Effective 3/1/2018, net of fee performance was calculated using 1/12 of the highest fee of 0.65%, applied monthly. Prior to 3/1/2018, net of fee performance was calculated using 1/12 of the highest fee of 0.55%, applied monthly. Actual investment advisory fees incurred by clients may vary. The management fee schedule is as follows: First $100 million – 0.40%, over $100 million – 0.35%. The composite inception date is January 1, 2002. Gross returns are used to calculate the composite three-year annualized ex-post standard deviation and the annual composite dispersion. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Newfleet Asset Management, LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Newfleet Asset Management, LLC has been independently verified for the periods January 1, 1990 through December 31, 2019. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The Multi-Sector Opportunistic Composite has had a performance examination for the periods June 2, 2011 through December 31, 2019. The verification and performance examination reports are available upon request. The firm maintains a complete list and description of composites, which is available upon request.
