

1Q 2024 Bank Loans Strategy

Strategy Description

- ▶ Flexible investment approach that provides prudent exposure to the bank loan market and strives to outperform the Credit Suisse Leveraged Loan Index over a market cycle.
 - Prioritizes mitigating risk (i.e., volatility, capital loss) predominantly through rigorous fundamental credit analysis and active portfolio management.
 - Identifies and invests in creditworthy issuers—companies with competitive advantages, sustainable capital structures, stable cash flow, and an ability to de-lever.
- ▶ Effectively captures the attractive attributes of the bank loan market—material yield, low interest rate sensitivity, low correlation to fixed rate debt, downside protection.
- ▶ Strategy benefits from the formal knowledge sharing across all global fixed income asset classes provided by Newfleet’s multi-sector platform.
- ▶ Investment guideline: minimum 80% in bank loans/securities, maximum 15% in non-U.S. issuers, maximum 25% in a single industry.

About Newfleet Asset Management

Newfleet Asset Management is a fixed income specialist with a legacy of dynamic, multi-sector investing since 1992. We offer a range of mandates that vary in duration, credit quality, and return/risk profile.

Index: The Credit Suisse Leveraged Loan Index is a market-weighted index that tracks the investable universe of the U.S. dollar denominated leveraged loans. The index is calculated on a total return basis. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

The ratings issued by Nationally Recognized Statistical Rating Organizations assess the credit worthiness of a corporation's or government's debt issues. The ratings apply to the fund's holdings and not the fund itself. Ratings are provided by Standard & Poor's, Moody's, and Fitch. For certain securities that are not rated by any of these three agencies, credit ratings from other agencies may be used. Where the rating agencies rate a security differently, Newfleet uses the higher rating. If a rating is not available, the bond is placed in the Not Rated category. Credit ratings are subject to change. Aaa, Aa, A, and Baa are investment grade ratings; Ba, B, Caa, Ca, C, and D are below-investment grade ratings.

Risk Considerations

Credit & Interest: Debt instruments are subject to various risks, including credit and interest rate risk. The issuer of a debt security may fail to make interest and/or principal payments. Values of debt instruments may rise or fall in response to changes in interest rates, and this risk may be enhanced with longer-term maturities.

Bank Loans: Bank loans may be unsecured or not fully collateralized, may be subject to restrictions on resale, may be less liquid and may trade infrequently on the secondary market. Bank loans settle on a delayed basis; thus, sale proceeds may not be available to meet redemptions for a substantial period of time after the sale of the loan. **High Yield-High Risk Fixed Income Securities:** There is a greater level of credit risk and price volatility involved with high yield securities than investment grade securities. **Leverage:** When a portfolio is leveraged, the value of its securities may be more volatile and all other risks may be compounded. **Liquidity:** Certain securities may be difficult to sell at a time and price beneficial to the portfolio. **Liquidity:** Certain securities may be difficult to sell at a time and price beneficial to the portfolio. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Local, regional, or global events such as war or military conflict, terrorism, pandemic, or recession could impact the portfolio, including hampering the ability of the portfolio's manager(s) to invest its assets as intended.

MARKET REVIEW & OUTLOOK

- ▶ After rate cuts failed to materialize in January or March, the bank loan sector saw a 2.52% return for 1Q, with almost all of it coupon-driven.
- ▶ We expect bank loans to return 7-8% this year.
- ▶ EBITDA growth has ticked up, while the downgrade-to-upgrade ratio is at a five-month low.
- ▶ Collateralized loan obligation (CLO) issuance was at \$48.8 billion for 1Q, the fastest pace since 4Q21.
- ▶ Retail inflows were positive for seven consecutive weeks through March 27.
- ▶ As of the end of 1Q, 38% of the loan market was priced at or over par.
- ▶ Borrowers were able to refinance and reprice—i.e., reduce interest expense—and push out loan maturities.
- ▶ \$10-11 billion of private credit deals came back into the broadly syndicated loan market to shake off higher-cost financing.
- ▶ About 10% of the market repriced at an average savings of about 54 basis points (bps).
- ▶ Even if the Fed cuts rates three times this year, the bank loans sector would still be yielding more than high yield because of its 100 bps in yield advantage.

For more detail on the macroeconomic backdrop and specific sectors, see [Newfleet's 1Q24 Market Review & Outlook](#) on [Newfleet.com](#).

STRATEGY PERFORMANCE

The Bank Loans Strategy (gross of fees) returned 2.14% in the first quarter versus the Credit Suisse Leveraged Loan Index return of 2.52%. For the last 12 months, the Strategy has returned 11.64% versus 12.40% for the Index. The following is a summary of the contributors and detractors of the representative account of the Strategy.

Current Quarter Contributors

- ▶ Strong issue selection within cable/wireless video, healthcare, and information technology helped performance.
- ▶ Cash holdings also helped performance.

Current Quarter Detractors

- ▶ Weak issue selection within the broadcasting, chemicals, gaming/leisure, energy, and services sectors detracted from performance.
- ▶ An underweight to CCC/Split CCC-rated loans had a negative impact on performance as risk assets outperformed.
- ▶ Higher-quality positioning within B-rated loans was also a detractor.

CURRENT POSITIONING & STRATEGY

Current loan market valuations look rich, but as the economy stays in better-than-expected shape, rate cut forecasts are delayed, borrowers successfully manage the cost of debt, and the base rate remains attractive, we think there is a long-term case for loans. Should investor demand stay healthy—particularly if the Fed skips rate cuts in May—capital markets might be open to riskier single-B borrowers, allowing them to reduce interest expense and improve overall loan fundamentals. All these dynamics will inform our view on implementation moving forward.

- ▶ We aim to be fully invested while incrementally adding higher-quality risk.
- ▶ We're overweight higher-quality Bs and underweight lower-quality Bs.
- ▶ We're also overweight on sectors exposed to the U.S. consumer, such as food and gaming/leisure. We're also overweight on healthcare.
- ▶ We maintain underweights on the information technology, wirelines, wireless, and cyclical sectors.

Past performance is not indicative of future results.

Year End	Composite Assets			Annual Performance Results					
	Total Firm Assets (billions)	U.S. Dollars (millions)	Number of Accounts	Composite			Benchmark†		Composite Dispersion

†Benchmark: Credit Suisse Leveraged Loan Index

Composite Dispersion: N.A. - Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year.

The Bank Loans Composite contains all fully discretionary, fee paying floating rate (bank loans) accounts. Emphasis is on investments in fixed income across multiple sectors of the fixed income market with the following restrictions: maximum below investment grade securities 100%, average credit quality is at least B and non-US exposure 0-5%. The strategy may invest up to 20% in high yield bonds. Leverage may be utilized to achieve the investment objective or to meet repurchase requests and for temporary, extraordinary or emergency purposes. The strategy seeks total return and income by investing in non-investment grade bank loans.

As of August 1, 2023, the Floating Rate Composite was renamed the Bank Loans Composite. Effective January 28, 2019, the composite's benchmark is the Credit Suisse Leveraged Loan Index, replacing the previous benchmark, the S&P/LSTA Leveraged Loan Index. This benchmark change is retroactive since inception. The Credit Suisse Leveraged Loan Index is a market-weighted index that tracks the investable universe of the U.S. dollar denominated leveraged loans. It has been selected for the benchmark because it is more widely used within the industry and the manager believes that the new index provides investors with a better correlated statistical tool for investment analysis and research than the prior index. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

Effective January 1, 2023, the Multi-Asset Credit (MAC) team from Stone Harbor Investment Partners joined Newfleet Asset Management (Newfleet). Effective July 1, 2022, Newfleet became a division of Virtus Fixed Income Advisers, LLC ("VFIA"), an SEC registered investment adviser. Prior to July 1, 2022, Newfleet Asset Management, LLC was a registered investment adviser and an indirect wholly owned subsidiary of Virtus Investment Partners. The minimum account size for this composite is \$15 million. The Bank Loans Composite was created on April 1, 2012. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Past performance is not indicative of future results. The U.S. Dollar is the currency used to express performance. The annual composite dispersion is an asset-weighted standard deviation calculated for the accounts in the composite the entire year.

Returns are presented gross and net of management fees and include the reinvestment of all income. Net returns are calculated by reducing the gross returns by the maximum fee charged to any account in the composite for the respective period. The maximum fee for the respective period could be different than the current fee schedule. Effective 10/1/21, net of fee performance was calculated using 1/12 of the highest fee of 0.45%, applied monthly. For the period 2/1/17 to 9/30/21, the fee was 0.50%, and included performance based fees. Prior to 2/1/17 the fee was 0.60%. Performance Fee: For accounts associated with a performance fulcrum fee, the fee rate will vary by up to +/- 0.18% and the performance fee shall be added to or subtracted from the base fee to arrive at the total fulcrum fee. The comparative index is the Credit Suisse Lev. Loan Index over the applicable measurement period. The performance fee rate will increase/decrease by 0.01% for each 0.0972% of outperformance/underperformance of the index over a trailing 12-month period. The total fulcrum fee (base fee +/- performance fee) is paid monthly in arrears. Actual investment advisory fees incurred by clients may vary. The management fee schedule is as follows: \$50 to \$100 million - 0.35%, over \$100 million - 0.30%. The composite inception date is 3/1/08. Effective 2/1/24, a significant cash flow policy of 15% was implemented. The policy requires the temporary removal of any portfolio incurring a client initiated significant cash and/or securities inflow or outflow of 15% or greater of portfolio market value. The temporary removal of such an account occurs at the beginning of the month in which the significant cash flow occurs. The account re-enters the composite at the beginning of the next month where the account meets the standard composite inclusion requirements. Additional information regarding the treatment of significant cash flows is available upon request. Gross returns are used to calculate the composite three-year annualized ex-post standard deviation and the annual composite dispersion. GIPS® is a registered trademark of CFA Institute. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

Newfleet claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Newfleet has been independently verified for the periods January 1, 1990 through December 31, 2022. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The Bank Loans Composite has had a performance examination for the periods June 2, 2011 through December 31, 2022. The verification and performance examination reports are available upon request. A list of composite descriptions, a list of limited distribution pooled fund descriptions, and a list of broad distribution pooled funds are available upon request.
